

# International Mobility

Nowadays, a great engineer needs to be able to communicate and work with people from various countries and diverse cultural backgrounds.

This is why I believe that international mobility is a **key step in my future career**.

## Scholar mobility projects:

- One semester in Canada through the ENSEEIHT exchange program, or a year in **Canada** for a double degree.

## Personal mobility project:

- A trip to **Japan** to practice my Japanese skills and discover this culture.

## Personal mobility:

- A trip to Sevilla and Cadiz , **Spain**.
- A trip to London, **UK**.
